## Reference

Mr Oussama Ameur worked for our company as a Junior Prototyping Engineer from 07.07.2021 to 23.12.2021.

iconmobile is an international consulting firm for product innovation with headquarters in Berlin and further offices in Ingolstadt, Munich, Santa Monica, Detroit and Shanghai.

As a member of the world's largest agency network WPP, we combine years of experience in design and user experience with technological know-how and business sense. With our service portfolio, we support clients from a wide range of industries such as automotive, consumer products, financial services or health care in the development of both groundbreaking and commercially successful innovations.

We accompany and guide our clients on the path of digital transformation: from strategy consulting and prototyping to implementation and optimization. In doing so, we are driven by a passion for design, creative curiosity and enthusiasm for new technologies to achieve the best possible results.

Mr von Ameur's activities included:

- Assembling and manufacturing PCBs in the reflow process for ongoing production.
- Adjusting and checking PCB layouts with Eagle
- Assembling cables, connectors, and electrical components for manufacturing sub-assemblies for current production
- Maintaining parts lists and procurement of electronic components for current production- Performing quality assurance tests on both sub-assemblies and complete units
- Support systematic troubleshooting, provide log files- Apply firmware updates to multiple sub-assemblies, maintain firmware versions on all instances produced in parallel- Maintain task management system operations and documentation (Jira and Confluence)- Assemble mechanical components into sub-assemblies

General support of the ongoing production under difficult conditions during the applicable Covid restrictions. Due to limited presence of all team members in the workplace, significantly higher coordination efforts were required.

Oussama Arneur contributed greatly to this.

- Assuming critical roles in practical integration tests with more than 15 users of a complex mechatronic system
- Performed critical roles in a live event with high production standards of the above-mentioned previously developed system.

Mr Arneur has extensive and versatile technical knowledge, which he always used confidently and skillfully in practice.

- Production of printed circuit boards and electronic assemblies
- Structured planning and tracking of required components for production
- Good communication with clear delineation of own abilities in relation to tasks
- Versatile interests, which Oussama gladly and often profitably brings into the company's work

Due to his precise analytical ability and his enormous perceptive faculty, he was at all times able to immediately grasp even difficult situations accurately and to quickly find good solutions. Mr Arneur showed exemplary initiative at all times and always identified fully with his tasks and our company, whereby he also impressed with his immense enthusiasm. Even in situations with a considerable workload, he always proved to be highly resilient.

He carried out all tasks completely independently, very carefully and thoughtfully. He always acted in a calm, considered, goal-oriented and highly precise manner. In doing so, he was always convincing in a good way, both in terms of quality and quantity. Mr Arneur was highly reliable.

Without exception, he found good solutions to all problems that arose:

- Successfully played an important role in development, production, quality assurance up to the delivery of a completely new product development.
- Successfully played a major role in a live event from production to broadcast.

Mr Arneur's performance has received our full appreciation without reservation.

He was held in high esteem by all because of his friendly and even-tempered nature. He was always helpful, courteous and, if necessary, put personal interests aside. His behaviour towards superiors, colleagues and customers was without exception impeccable.
